1. OVERVIEW

The LONGLABV1V10_np_yymmdd dataset contains **72,002** records, one for each participant who gave consent and completed a lab at visit 1-10, excluding visit 8. The purpose of this dataset is to provide ARIC collaborators with a comprehensive lab dataset for ARIC participants across these visits.

LONGLABV1V10_np_yymmdd is longitudinal by visit and wide by lab test type. For each lab test, there exists six variables: Value (numeric lab value), Method (instrument used to collect data), Follow up days from Collection Date, Year of Collection Date, Follow up days from Result Date, and Year of Result Date. The naming notation of these variables is the shorthand of the lab test (see table below) followed by the relevant variable prefix: value, method, collection date, or result date. The dates in the LONGLABV1V10_np dataset are recalculated as the number of follow-up days from enrollment; these variables have the suffix, 'FollowUpDays.' The dataset contains multiple records per participant ID by visit. Most of the lab values are the lab reported values. Additional derived variables have been added to the dataset. The derived lab values method description is defined as "Calculated Value." Additional information such as units of measurement and biospecimen type can be found in the labels of these 'value' variables. Each record provides fasting information collected and calculated from the lab form (Fast08, Fast12, and Fasting_Time). Additional notes: 1) future versions of the LONGLAB dataset will round the fasting times, and 2) " " notation in the dictionary entries indicate the information is not available or missing.

LONGLABV1V10_np_yymmdd was created by merging ARIC participants' respective lab datasets together and compiling them by visit. Some ARIC participants may be missing lab values at certain visits or have missing values within existing visits either due to lack of lab data in the source dataset or discrepancies in lab test types collected between visits. Once the lab datasets were compiled, consent was applied to remove visit-specific records where the participant indicated "No Consent" for lab data use. Participants who recorded "ARIC Only Consent" or any other consent type were included in this dataset.
